Symptom	Clinical Conditions of the second
Shortness of breath (Dyspnea)	Lung disease such a parenchymal lung disease, airway or
	pleural disease
	Cardiac disease
	Pericardial disease
	Pulmonary hypertension (high blood pressure in pulmonary blood vessels without lung damage)
	Chest wall diseases such as scoliosis or kyphosis (twisted spine)
	 Weak muscles or nerves supplying respiratory muscles (e.g. muscular dystrophy)
	Fluid accumulation in the abdomen (e.g. ascites - common with liver disease)
	Anaemia
	Altitude sickness
	Metabolic acidosis (e.g. diabetic complications)
	Obesity
	Pregnancy
Fast breathing	Discourage the list or detailed in second of Leave 1
(Tachypnea)	Please refer the list as detailed in respect of dyspnca, above
Shortness of breath lying down	Lung disease such as parenchymal lung disease, airway or pleural disease
(Orthopnea)	Cardiac disease
(G.M. p. 102)	Chest wall diseases such as scoliosis or kyphosis (twisted)
	spine)
	 Weak muscles or nerves supplying respiratory muscles (e.g. muscular dystrophy - specifically diaphragm weakness)
	Fluid accumulation in the abdomen (e.g. ascites - common
	with liver disease)
	Obesity
	Pregnancy
Tachycardia	Can be caused by a variety of problems including fever, hyperthyroidism, heart disease and pain
Cough	Commonly an airwary condition rather than an indicator of lung damage. Also evident in cardiac disease, muscle or nerve weakness
Chest Pain	Heart disease
	Pericardial disease
	Airway disease
	Parenchymal and pleural disease
	• Chest wall problems (e.g. trauma, cancer or muscle spasm)
	Esophageal disease (particularly reflux)
Low oxygen levels in	Parenchymal lung disease
blood	Airway or pleural disease
	Cardiac disease (particularly intra-cardiac shunts often seen with congenital heart disease)
	Chest wall diseases such as scoliosis or kyphosis (twisted spine)
	• Weak muscles or nerves supplying respiratory muscles (e.g.
	muscular dystrophy - specifically diaphragm weakness)
	Fluid accumulation in the abdomen (e.g. ascites - common with liver disease)
	Liver disease with abnormal blood vessels in the lung
	(however not associated with any lung damage) Obesity
